CARE INSTRUCTIONS

Engineered marble is one of the easiest bathroom surfaces to maintain. There are a number of easy-to-use readily available cleaning products well-suited for use on your engineered marble or synthetic products.

RECOMMENDED CLEANING PRODUCTS

- Simple Green
- Kaboom Foam-Tastic Bathroom Cleaner
- Puracy Natural Multi-Surface Cleaner
- Mild Soap and Water
- Automotive Detail Sprays

CAUTION: Do not use any abrasive cleaners such as COMET or similar cleaning products. Products that contain grit or sand will harm the finish on your new marble and may void your warranty

TO REMOVE DIFFICULT STAINS

To remove paint, permanent marker, nail polish, or other difficult stains from the surface, use Denatured Alcohol or Acetone. If the stain is from hard water or mineral deposit, try using a cleaner for removing iron, calcium, or other such mineral deposits that are in your water supply. Most cleaning chemicals will not damage the finished coating so long as label instructions are followed.

ADDITIONAL TIPS

To ensure that your products look great for a lifetime, avoid leaving objects permanently in place as doing so may result in minor discoloration.

Most surface scratches can be removed using a liquid cleaning/ polishing compound, such as an automotive detail spray and a soft cloth. These products are made for use on gel-coated surfaces and will remove soap scum while polishing your marble and fixtures. Automotive detail spray also works on your shower door. It not only eliminates water-spotting and soap scum build-up, but it further protects by sealing the glass surfaces.
